

Faster, safer, more efficient. Our load handling equipment is custom designed for use in the drilling industry where B.O.P. lift requirements may exceed the rig's safe lifting capacity or simply to save time. Our **totally hydraulic**, diesel powered system **eliminates electrical components** that could fail in harsh environments.

Hydraulic Winches

Diesel Powered Hydraulic Pumps

Hydraulic Remote Control

Faster and Safer B.O.P. Lifts

Extreme Lift Capacities - In excess of 100,000 pounds straight pull with quick setup and increased safety.

Hydraulic Stack Lift - Hydraulic pumps, winches, and joy stick control eliminate electrical components.

Hydraulic Remote Control - More responsive control located at the point of the lift with 100 feet working radius.

Emergency Shutdown System - Air intake shutdown, low oil shutdown, high temperature shutdown, and spark arresting muffler.

Safety Brake - Automatically engages to prevent sudden release of load.

Lift Records - Every lift is recorded and documented for increased customer confidence. Every cable is tested and certified per industry standards.

Compact Skid - Designed for fast, easy installation on land and offshore applications.
